EDI - Development and Upgrade

Our plan to transition to the upgrade standards and increase the types of information being sent between suppliers and Woolworths Supermarkets is underway.

This is an important and exciting step forward as the outdated standard is costly to both Woolworths and Suppliers. The new messages will improve the communications between our businesses and reduce the level of administration required.

The size and nature of your business indicates that you should be communicating using EDI in the new message sets and standards. Woolworths is committed to working with you to upgrade over the next 18 months.

What can you expect:
- You will be contacted in the next 3 months to discuss plans to migrate.
- Any development to your systems to enable this change should be considered in your budgeting process.
- ASN receiving will be the method used to deliver stock to our network, leveraging the EDI messages.
- We will be delivering additional and modified messaging to include PO, PO confirmation, ASN, Receiving Advice, invoice and electronic remittance.

We are looking for early adopters, please make contact. (supplychainpartners@woolworths.com.au) if you would like to be part of this early phase.
